

## JACO Site Summary

The JACO site was historically occupied by JACO Plating for electroplating activities. The property reverted to the City in 1996.

Through the Clean Michigan Initiative, the Michigan Department of Environmental Quality invested \$600,000 into the property to remove wastes, demolish the building, remove soils, and conduct environmental assessment activities. The Jackson Brownfield Redevelopment Authority had a Phase I Environmental Site Assessment prepared to help market the property.

## Brownfield Facts

- Contamination removed by MDEQ makes the site suitable for commercial or industrial use
- Jackson Brownfield Redevelopment Authority investment through US EPA Brownfield Assessment Grant for environmental assessment activities of \$3,000
